Introduction

1.1 Purpose

The purpose of this document is to define and provide details for accessing API for UDYAM system information from ULIP system.

This document details the following points:

1. **Data Integration between UDYAM and ULIP web service:** Identification of operational points where data integration between UDYAM and ULIP web service will be needed.
2. **Technical Approach** for performing Data Integration

The Overall Description

Users will share information such as **UdyamNo**, based on data sent by user ULIP system will call respective **UDYAM** API for accessing information.

Following are the points for accessing different udyam information: -

1. This API will share data based on information provided by users.
2. ULIP will expose API for getting data from UDYAM API.
3. **UDYAM/01** API will take **UdyamNo** from user and get data from UDYAM API.

1.2 Data Integration between UDYAM System and ULIP application

Users will share information with the ULIP system based on data shared ULIP will provide data to user.

1.3 UDYAM/01

This API will take **UdyamNo** and connect with UDYAM API to get data.

S. No.	Field Name	Field Description	Format	Required/Not – Required	Length
1	UdyamNo	UdyamNo as available in UDYAM system.	^UDYAM-[A-Z]{2}-\d{2}-\d{7}\$	Required	Max 19

1.3.1 Technical Approach

1. All the data will be shared through rest web services.
2. ULIP system will provide **UdyamNo** for which detail is required.
3. UDYAM API will share details different udyam numbers which exist in UDYAM system in JSON format.
4. UDYAM Integration will add JSON in **response** key in response body.
5. ULIP system will provide the data in JSON Object format in response body.

Example: " **UdyamNo** " "**UDYAM-AP-01-0019566**" is shared by ULIP system, then UDYAM-integration will make a request to UDYAM API.

Request:

The request must be of the following format, where UdyamNo is passed within the URL body in JSON format.

<https://www.ulip.dpiit.gov.in/ulip/v1.0.0/UDYAM/01>

```
{" UdyamNo ": "UDYAM-AP-01-0019566"}
```

Curl URL

```
curl --location 'https://www.ulip.dpiit.gov.in/ulip/v1.0.0/UDYAM/01' \  
--header 'Authorization: Bearer  
eyJhbGciOiJIUzUxMiJ9.eyJhcHBzIjoieXBpR2F0ZXdheSIsInN1Yil6InVsaXAiLCJpYXQiOiE3ODUxNTQ0NDB9.GaOrElr7gmKGPcgMldqvOhw1b1A2mXkdptIXUHw7wa2Y590Z5IcO  
OnswglNfHsT9NYO3VXXqQsN8Y-J9YNEVBg' \  
--header 'Accept: application/json' \  
--header 'Content-Type: application/json' \  
--data '{"UdyamNo":"UDYAM-AP-01-0019566"}'
```

For obtaining authentication token, refer [Section 1.4](#)

Response

To acknowledge the above request, ULIP will send the response below –

a) In case of invalid format**1. Invalid UdyamNo**

```
{
  "response": null,
  "error": "true",
  "code": "400 BAD_REQUEST",
  "message": "Data format failed OR wrong value entered at: UdyamNo. Format
should follow ^UDYAM-[A-Z]{2}-\\d{2}-\\d{7}$"
}
```

b) In case of UdyamNo does not exist in UDYAM system

```
{
  "response": [
    {
      "responseStatus": "ERROR",
      "message": {
        "id": null,
        "params": null,
        "text": "Wrong Detail"
      }
    }
  ],
  "error": "false",
  "code": "200",
  "message": "Success"
}
```

c) In case UdyamNo number exist

```
{
  "response": [
    {
      "response": {
        "EnterpriseDetails": [
          {
            "ApplicationId": 9401089,

```

Status Code 200: udyam data response

Status Code 400: Bad request (Invalid json syntax, invalid json key)

Status Code 401 or 403: Unauthenticated or Unauthorized

Status Code 500: Some internal server errors occurred

Status Code 502: Server is not responding.

1.4 Data Transmission & Authentication Mechanism

All data exchange would be done over secure HTTP (HTTPS). Request from ULIP's system would be made in UDYAM system through a data exchange URL that has following form:

<https://www.ulip.dpiit.gov.in/ulip/v1.0.0/UDYAM/01>

Body:

```
{"UdyamNo": "UDYAM-AP-01-0019566"}
```

Access to above data exchange URL would be authorized by use of a security mechanism implemented by the ULIP system. It is as follows:

- First time access: It would require a username and password [which would be shared with user beforehand]. Once user hit with valid user id and password, ULIP system will return a basic authorization token to user, using that token user will communicate with ULIP system until tokens will not get expired.

Summary of HTTP Basic Authentication is as follows:

First time User hits ULIP secured API through username and password for access token as follow-

```
curl -X POST
'https://www.ulip.dpiit.gov.in/ulip/v1.0.0/user/login'
-H 'accept: application/json'
-H 'content-type: application/json'
-data '{"username": "xxxxxx", "password": "XXxxx@12345"} '
```

Authorization:

Bearer

```
eyJhbGciOiJIUzUxMiJ9.eyJhcHBzIjoieXBpR2F0ZXZheSIsInN1YiI6InVsaXAiLCJpYXQiOiJlE3ODM1NzI4MDI4.1u-w6fZZed25xJa6ng3gy3K5SgXhMhngf9BcLiMQA0HMB4LoJtB79JogHG7une27hj2nsbSsBgVifoBH4-6w
```

Upon successful authentication, the user would be logged into the ULIP system and get an access token. Though this token user can communicate with ULIP. This token has expiry time which represents user session. The session time out for the same to be fixed hour, generally it is for 30 minutes. If there is no request coming from user for 30 minutes, then session (token) will be expired, and user need to re authenticate.

Using The above token, user can request ULIP system for vehicle details as follow –

```
curl --location 'https://www.ulip.dpiit.gov.in/ulip/v1.0.0/UDYAM/01' \  
--header 'Authorization: Bearer  
eyJhbGciOiJIUzUxMiJ9.eyJhcHBzIjoiiYXBpR2F0ZXdhcSIsInN1YiI6InVsaXAiLCJpYXQiOiJlE3  
ODM1NzI4MDI9.1u-  
w6fZZed25xJa6ng3gy3K5SgXhMhngf9BcLiMQA0HMB4loJtB79JogHG7une27hjut2nsbSsBgVIfo  
BH4-6w' \  
--header 'Content-Type: application/json' \  
--header 'Accept: application/json' \  
--data '{" UdyamNo": "UDYAM-AP-01-0019566"}'
```
